**MAKING DEVELOPMENT SUSTAINABLE: THE FUTURE OF DISASTER RISK MANAGEMENT**  
The GAR is a comprehensive review and analysis of disaster risk and risk management. It is published every two years. GAR15 was launched in March 2015, it looks at how to make development sustainable.

[Visit the GAR15 website →](#)

The Third World Conference on Disaster Risk Reduction took place in 2015.

**"World threatened by dangerous and unacceptable levels of risk from disasters."**  
– Ban Ki-moon, United Nations Secretary-General, 2015

The Global Assessment Report on Disaster Risk Reduction (GAR) is a biennial global assessment of disaster risk reduction and comprehensive review and analysis of the natural hazards that are affecting humanity. The GAR contributes to achieving the Hyogo Framework of Action (HFA) through monitoring risk patterns and trends and progress in disaster risk reduction while providing strategic policy

**Most disasters that could happen have not happened yet.**

Economic losses from disasters such as earthquakes, tsunamis, cyclones and flooding are now reaching an average of **US\$250 billion to US\$300 billion** each year. **Future losses** (expected annual losses) are now estimated at US\$314 billion in the built environment alone. **This is the amount that countries should set aside each year to cover future disaster losses.** ( → Chapter 3 )

LMU LUDWIG-MAXIMILIANS-UNIVERSITÄT MÜNCHEN Flash Floods lrz

- Form swiftly due to (extremely) high rainfall rates
- Little or no prior warning
- Devastating consequences (casualties, economic losses, ...)
- Monitoring and forecasting of floods:
  - European Flood Awareness System (EFAS)
  - Global Flood Detection System (GFDS)
  - Global Flood Awareness System (GloFAS)
- Problem: spatial resolution 50-100 km  
 → Flash floods remain undetected

**Home**

The DRIHM project is a European running from 1st September 2011 February 2015 aiming at providing fully integrated workflow platform predicting, managing and mitigating related to extreme weather phenomena

Predicting weather and climate and its impact on environment, including hazards such as landslides, is still one of the main challenges of the 21st century with significant societal and economic consequences. At the heart of this challenge, as also stated

MNM D. Kranzmüller Moscow, 9 March 2016 9

LMU LUDWIG-MAXIMILIANS-UNIVERSITÄT MÜNCHEN

## Possible Solution – Environmental Computing

lrz

- Combine meteorology, hydrology, hydraulics through computer science
- Increase spatial and temporal resolution (data quality)
  - Regional Climate Models (RCM)
- Compute ensembles of forecasts to cover all potential outcomes
- Start and finish computation in time to provide lead time for evacuation measures

→ Simulate ensembles of forecasts  
 with high-resolution on  
 high-performance computing (HPC) infrastructures  
~~on demand when triggered by increased rainfall rates~~

Moscow, 9 March 2016 14

Phase 1 (IBM System x iDataPlex):

- 3.2 PFlops peak performance
- 9216 IBM iDataPlex dx360M4 nodes in 18 compute node islands
- 2 Intel Xeon E5-2680 processors and 32 GB of memory per compute node
- 147,456 compute cores
- Network Infiniband FDR10 (fat tree)

Phase 2 (Lenovo NeXtScale WCT):

- 3.6 PFlops peak performance
- 3072 Lenovo NeXtScale nx360M5 WCT nodes in 6 compute node islands
- 2 Intel Xeon E5-2697v3 processors and 64 GB of memory per compute node
- 86,016 compute cores
- Network Infiniband FDR14 (fat tree)

Common GPFS file systems with 10 PB and 5 PB usable storage size respectively  
 Common programming environment  
 Direct warm-water cooled system technology

## SuperMUC Phase 2 @ LRZ

lrz

Photos: Torsten Bloth, Lenovo

High Energy Efficiency

- ✓ Usage of Intel Xeon E5 2697v3 processors
- ✓ Direct liquid cooling
  - 10% power advantage over air cooled system
  - 25% power advantage due to chiller-less cooling
- ✓ Energy-aware scheduling
  - 6% power advantage
  - ~40% power advantage
  - Total annual savings of ~2 Mio. € for SuperMUC Phase 1 and 2

MNM D. Kranzmüller Slide: Herbert Huber Moscow, 9 March 2016 20

LMU LUDWIG-MAXIMILIANS-UNIVERSITÄT MÜNCHEN **LRZ Application Mix** lrz

- Computational Fluid Dynamics: Optimisation of turbines and wings, noise reduction, air conditioning in trains
- Fusion: Plasma in a future fusion reactor (ITER)
- Astrophysics: Origin and evolution of stars and galaxies
- Solid State Physics: Superconductivity, surface properties
- Geophysics: Earth quake scenarios
- Material Science: Semiconductors
- Chemistry: Catalytic reactions
- Medicine and Medical Engineering: Blood flow, aneurysms, air conditioning of operating theatres
- Biophysics: Properties of viruses, genome analysis
- Climate research: Currents in oceans

**Partnership Initiative**  
**Computational Sciences  $\pi$ CS**

- **Individualized services** for selected scientific groups – **flagship role**
  - Dedicated point-of-contact
  - Individual support and guidance and targeted training & education
  - Planning dependability for use case specific optimized IT infrastructures
  - Early access to latest IT infrastructure (hard- and software) developments and specification of future requirements
  - Access to IT competence network and expertise at CS and Math departments
- **Partner contribution**
  - Embedding IT experts in user groups
  - Joint research projects (including funding)
  - Scientific partnership – equal footing – joint publications
- **LRZ benefits**
  - Understanding the (current and future) needs and requirements of the respective scientific domain
  - Developing future services for all user groups
  - Thematic focusing: **Environmental Computing**

**Conclusions**

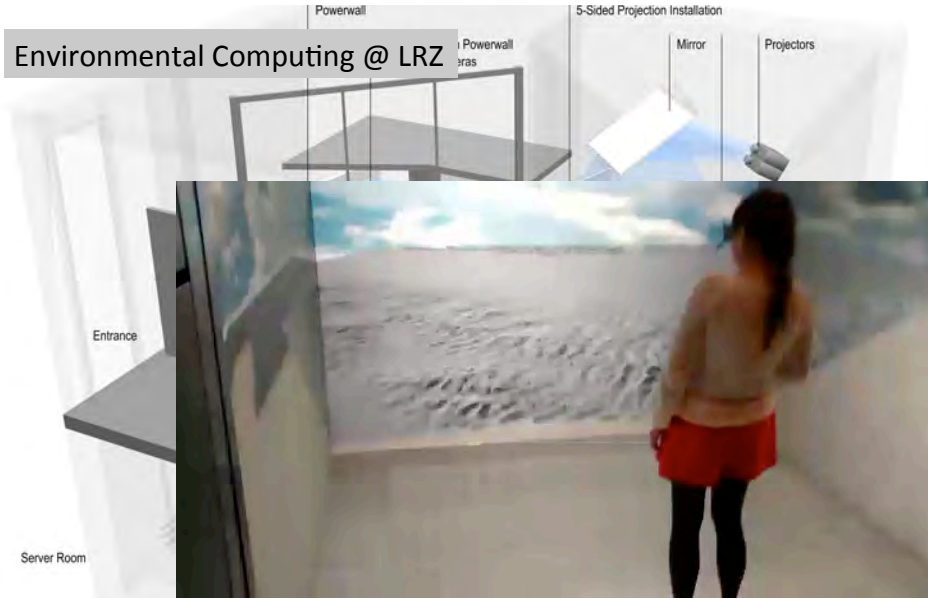

- **Environmental Computing** needs IT-Infrastructures (including HPC)
- **Energy Efficiency** is an important part to maximize scientific throughput
- Computational science needs to be an integral part of teaching domain scientists
  - Learn how to get access to HPC infrastructures
  - Learn how to program HPC infrastructures with increasing complexity, heterogeneity and scalability – efficiency, reliability, portability
- The LRZ Partnership Initiative Computational Science (piCS) tries to improve user support
